

PRD (V1)

Product Name

Mot-à-Mot

1. Product Overview

Vision

Help beginner French learners confidently express everyday thoughts in French by providing instant, beginner-friendly corrections and explanations before they send a message.

Mot-à-Mot shortens the learning loop between **thinking, writing, correcting, understanding, and communicating**.

Unlike general-purpose AI assistants, Mot-à-Mot is optimized for one specific job:

Help learners quickly verify and improve a French message before sending it.

The product should feel like a lightweight writing assistant that sits between the learner's thought and the final message they send.

2. Problem Statement

Beginner French learners often practice by translating everyday thoughts into French using the vocabulary and grammar they already know.

Many use ChatGPT to verify their messages before sending them. While ChatGPT can provide corrections, the experience is optimized for conversation rather than language learning.

As a result, learners spend more time prompting, reading long explanations, and finding corrections than actually practicing and communicating.

The current workflow creates unnecessary friction and discourages frequent language practice.

Current Workflow

Think of message

↓

Open ChatGPT

↓

Paste French sentence

↓

Ask if correct

↓

Read long explanation

↓

Find corrected sentence

↓

Copy correction

↓

Return to WhatsApp

↓

Paste

↓

Send

Average interaction requires multiple prompts, context switching, and manual copying, creating a slow feedback loop.

Pain Points

1. High Interaction Cost

The number of steps required to verify a simple message discourages frequent practice.

2. Inconsistent Feedback

AI responses vary in format and length, making it difficult for beginners to quickly locate corrections and understand mistakes.

3. Explanations Are Not Beginner Friendly

Grammar explanations often assume knowledge of grammatical terminology and can overwhelm novice learners.

4. Slow Communication Loop

Learners want confidence before sending a message, but existing tools interrupt the flow of conversation.

3. Target User

Primary User

French learners between A1 and B1 proficiency levels.

Characteristics

- Knows basic vocabulary and grammar
- Learns independently or semi-independently
- Frequently translates thoughts into French
- Wants immediate feedback
- Uses French in texting and casual communication
- Practices by thinking in French

Goals

- Express everyday thoughts confidently
 - Think directly in French
 - Learn from mistakes
 - Improve grammar naturally through repetition
 - Send messages faster with greater confidence
-

4. User Stories

User Story 1

As a beginner French learner, I want to type or speak a French sentence and instantly receive structured corrections so that I can confidently send my message.

User Story 2

As a beginner French learner, I want to understand why my sentence is incorrect so that I can avoid making the same mistake again.

5. Success Metrics

North Star Metric

Time to Understanding < 20 Seconds

The user should be able to:

- Submit a sentence
- Understand mistakes
- Review the correction
- Copy the corrected version

within 20 seconds.

Secondary Success Metrics

- Percentage of corrections copied by users
 - Average number of sentences checked per session
 - Average response time
 - User-reported confidence before sending a message
-

6. MVP Scope

Included

- ✓ Type a French sentence
- ✓ Speak a French sentence
- ✓ AI interprets intended meaning
- ✓ AI identifies mistakes
- ✓ AI explains mistakes in beginner-friendly language
- ✓ AI generates a natural French correction
- ✓ AI evaluates grammar quality

✓ AI evaluates conversational naturalness

✓ Copy corrected sentence

Excluded

✗ User accounts

✗ Login

✗ Progress tracking

✗ Streaks

✗ Flashcards

✗ Vocabulary quizzes

✗ Conversation mode

✗ Personalized learning plans

✗ Community features

✗ Meaning correction ("This is not what I meant") — V2

7. User Flow

Paste Into Messaging App

↓

Send

8. Functional Requirements

FR1 — Sentence Input

The user can:

- Type French text
- Edit text
- Submit text for analysis

FR2 — Voice Input

The user can:

- Tap microphone button
- Speak a sentence
- Automatically convert speech to text
- Review transcript
- Edit transcript before submission

FR3 — AI Analysis

The AI should return the following structured response.

1. What I Understood

Display the English meaning the AI inferred from the user's sentence.

Purpose:

- Verify intended communication
 - Help users understand whether the message conveys the desired meaning
-

2. Correct Sentence

Provide the most natural French version of the sentence.

Requirements:

- Prioritize natural conversational French
 - Do not simply fix grammar
 - Prefer phrasing that a native speaker would naturally use
-

3. Changes Made

Display corrections individually.

Example:

You Wrote	Better French	Why
Je arrive	J'arrive	In French, the vowel is dropped before another vowel to make the sentence sound natural.

Requirements:

- One correction per row
 - Beginner-friendly explanations
 - Avoid excessive grammatical terminology
-

4. Grammar Notes

Provide short explanations for important grammar concepts.

Requirements:

- Maximum 2–3 lines per note
- Simple language

- Actionable guidance
 - No long paragraphs
-

5. Quality Ratings

Evaluate the original sentence.

Grammar

How grammatically correct the sentence is.

Naturalness

How closely the sentence resembles native French.

Display as ratings rather than grades to avoid discouraging learners.

Example:

Grammar

★★★★☆

Naturalness

★★★★☆

FR4 — Copy Correction

The user can:

- Copy the corrected sentence with one tap
 - Paste directly into a messaging application
-

9. Non-Functional Requirements

The application should:

- Return results in under 5 seconds
 - Work on desktop and mobile devices
 - Require no onboarding
 - Require no account creation
 - Be usable without training or tutorials
 - Minimize clicks and context switching
-

10. Product Principles

Principle 1: Optimize for Communication

The goal is not perfect grammar.

The goal is helping users confidently send messages.

Principle 2: Every Correction Should Teach Something

Every correction should include an explanation.

Users should learn from mistakes rather than simply receiving answers.

Principle 3: Explain, Don't Overwhelm

Feedback should be concise, beginner-friendly, and easy to scan.

Principle 4: Natural French First

Prioritize how native speakers would actually express the thought.

Avoid literal translations.

Principle 5: Speed Matters

Every feature should reduce friction and support fast communication.

If a feature slows down the correction loop, it should not be included in the MVP.

11. Competitive Positioning

Product	Strength	Gap
ChatGPT	Flexible and powerful	Too conversational and inconsistent for quick message correction
Duolingo ↗	Structured lessons	Not optimized for real-life message writing
DeepL ↗	Excellent translations	Limited educational feedback

Product	Strength	Gap
LanguageTool ↗	Grammar checking	Not designed specifically for beginner French learners

Positioning Statement

Mot-à-Mot is an AI writing assistant for beginner French learners that helps them confidently send messages by providing fast, structured corrections and beginner-friendly explanations.

Unlike translators or language-learning apps, Mot-à-Mot is designed specifically for the moment right before a learner presses **Send**.
