

I actually think we should make one small but important distinction before we write this.

What you're asking for isn't really a **Design Specification** anymore.

It's a **Component Library & Screen Specification**.

That's exactly what frontend engineers (and Claude) need. It defines:

- the reusable building blocks (components)
- how they're assembled into screens
- how they behave

It doesn't repeat colors (UI Style Guide) or user goals (UX Spec).

Below is the version I'd be happy to hand to an engineer.

04. Component Library & Screen Specification (V1)

Product

Mot-à-Mot

1. Overview

Purpose

This document defines the reusable UI components and screen layouts for Mot-à-Mot.

It serves as the implementation blueprint for the application. All screens should be assembled using the reusable components defined below.

Component styling should follow the **UI Style Guide**, while user interactions should follow the **UX Design Specification**.

2. Component Library

C-01 Primary Button

Purpose

Used On

- Landing Screen
- Results Screen

Variants

- Check My French
- Copy Message

States

- Default
 - Hover
 - Disabled
 - Loading
 - Success ("✓ Copied!")
-

C-02 Secondary Button

Purpose

Represents a secondary action that should remain visible but visually subordinate to the primary action.

Used On

- Results Screen

Variant

- Check Another Sentence

Behaviour

Returns the user to the Landing Screen.

The previous sentence is cleared.

The text cursor is automatically focused inside the input field.

The keyboard opens automatically on mobile.

C-03 Multi-line Text Input

Purpose

Allows users to type their French message.

Properties

- Multi-line
- Editable
- Responsive width
- Auto focus on Landing Screen
- Placeholder text

Placeholder

Je ne peux pas venir aujourd'hui.

States

- Empty
 - Typing
 - Focused
 - Warning
 - Error
-

C-04 Voice Input Button

Purpose

Allows users to dictate a French sentence.

States

- Idle
 - Listening
 - Processing
 - Error
-

C-05 Information Card

Purpose

Displays grouped information.

Used For

- What I Understood

- Ready to Send
- Why These Changes?

Structure

- Optional icon
 - Title
 - Content
 - Optional action
-

C-06 Comparison Table

Purpose

Displays sentence corrections.

Columns

- You Wrote
- Better French
- Why

Rows

Dynamic.

One row per correction.

C-07 Rating Bar

Purpose

Displays sentence quality.

Used For

- Grammar
- Naturalness

Structure

- Label
 - Progress Bar
-

C-08 Status Banner

Purpose

Communicates system feedback.

Types

- Success
 - Warning
 - Error
-

C-09 Loading Indicator

Purpose

Indicates AI processing.

Components

- Spinner
 - Rotating loading message
-

C-10 Section Header

Purpose

Provides consistent section headings throughout the Results Screen.

Structure

- Icon
 - Title
 - Divider
-

3. Screen Specifications

Screen S-01 — Landing

Goal

Components

- App Title
- Tagline
- Prompt Label
- C-03 Multi-line Text Input
- C-04 Voice Input Button
- C-01 Primary Button (Check My French)

Primary Action

Check My French

Validation

The primary button remains disabled until the input field contains text.

Exit Condition

Successful submission transitions to the Loading Screen.

Screen S-02 — Loading

Goal

Provide visual feedback while the AI processes the message.

Components

- C-09 Loading Indicator

Loading Messages

Rotate every 1–2 seconds.

- Looking for the most natural way to say it...
- Checking grammar...
- Polishing your message...
- Every correction is one step closer to fluency.
- Almost ready...

Exit Condition

Automatically transitions to the Results Screen when the AI response is received.

Screen S-03 — Results

Goal

Present corrections in a way that prioritizes communication before learning.

Components (Top to Bottom)

1. C-05 Information Card — What I Understood
2. C-05 Information Card — Ready to Send
3. C-01 Primary Button — Copy Message
4. C-02 Secondary Button — Check Another Sentence
5. C-06 Comparison Table — Changes Made
6. C-05 Information Card — Why These Changes?
7. C-07 Rating Bar — Grammar
8. C-07 Rating Bar — Naturalness

Primary Action

Copy Message

Secondary Action

Check Another Sentence

Behaviour

Selecting **Copy Message**

- Copies the corrected French sentence to the clipboard.
- Displays ✓ **Copied!** for approximately two seconds.

Selecting **Check Another Sentence**

- Returns to the Landing Screen.
- Clears the previous sentence.
- Places the cursor in the input field.
- Automatically focuses the text input.

4. Screen Navigation

Landing

Loading

Results

5. Component Hierarchy

Application

6. Reusability Rules

- Components should be reused across screens whenever possible.
- Styling should follow the **UI Style Guide**.
- Behaviour should follow the **UX Design Specification**.
- New components should only be introduced if an existing component cannot satisfy the requirement.
- Components should remain modular to support future product expansion.

One final suggestion

At this point, I would **stop writing documents**.

You now have:

-  PRD
-  UX Design Specification
-  UI Style Guide
-  Component Library & Screen Specification

That's enough context for Claude to produce a high-quality first version. If we keep documenting, we'll hit diminishing returns.

My recommendation is to switch to **Figma next**. We can design the three screens in under an hour, export them, and then give Claude **both the documentation and the visual mockups**. That combination is far more powerful than additional specification documents and is much closer to how modern AI-assisted product development works.
